Execute excellence by
expanding the power
of your lab automation

TYPING

How do you keep patient safety at the forefront while also addressing all the other daily issues?

Optimize the economic and human resources, workload, and space availability

- Maximize automation, minimizing errors and delays to further reduce costs and patient care delays
- Optimize staff resources and reduce waste while providing excellent service throughout the product's lifetime

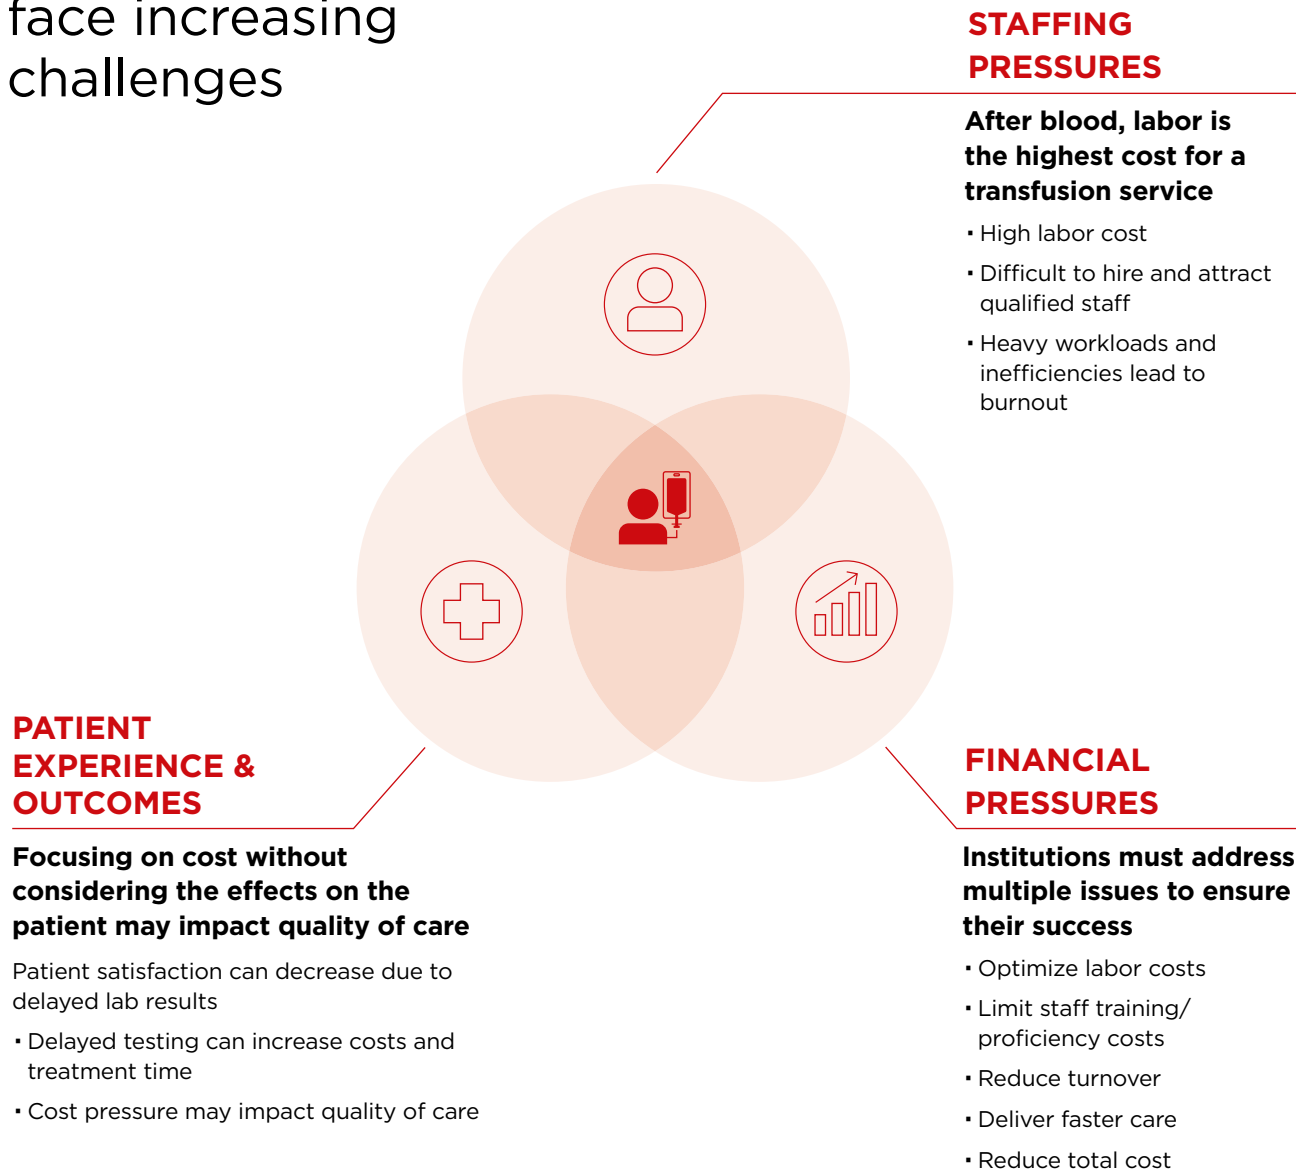

Experience the benefits of Erytra Eflexis, the fully automated analyzer for immunohematology testing

Erytra Eflexis is a state-of-the-art, mid-sized analyzer that performs pretransfusion compatibility testing. By using Erytra Eflexis, you can optimize staff resources, reduce waste, improve patient care, increase efficiency and accuracy, simplify staff training, and allow for high throughput.

Healthcare organizations face increasing challenges

It's time to challenge the status quo by focusing your laboratory automation on your needs and goals

By automating your immunohematology testing using Erytra Eflexis, you can benefit from

Error reduction and improved clinical outcomes

ENHANCED SAFETY

- Reduced laboratory errors with complete automation of testing and standardized results
- Improved process quality and reproducibility with rapid automation of testing needs
- Accuracy of results verified via discrepancy check in the results database
- Prioritized emergency patients with an optimized process for STAT samples
- High-resolution reading with a multi-functional CCD camera and artificial vision algorithm
- Less operator exposure to biohazard with direct waste drain and automatic card disposal
- Optimized reading process with high-resolution color images and remote access
- Up-to-date and accurate information on workflow status and pending timings

Cost savings

IMPROVED EFFICIENCY

- Increased walk-away time and high autonomy due to high capacity for reagents, samples, and fluids
- Minimal hands-on time frees staff to perform other lab tasks, increasing overall lab efficiency
- Optimized workflow and system efficiency with dynamic flow adaptation
- Ability to run for a full shift before hands-on time is needed
- Enhanced lab productivity with Grifols unique probe technology for rapid test performance
- Reduced reagent handling with on-board stability of reagents RBCs
- Extended capacity of resources with 100% reuse of partially used cards
- Secure Remote Connectivity tool allows fast remote intervention from experts, minimizing downtime

Streamlined operations

SIMPLICITY

- Easy to learn and use, reducing employee training time
- Improved usability with clear icons, warnings, and alarms
- Increased throughput and instrument performance with optimized planning
- Customizable to meet different lab needs
- Compact design optimizes lab space and supports lean standards
- Minimal monthly decontamination procedures
- Increased traceability with password-controlled user roles

“Grifols immunochemistry analyzers have proven to be flexible to various workflows, ensuring the complete automation of routine procedures without any delays.

The combination of reagents and instruments, allows the lab to achieve conclusive diagnostic results with ease.

We are very satisfied with the accompaniment and support provided by the Grifols team.”

Dr. C. Vezzoli,

Lab Director of the Transfusion Service in Chiari Hospital, Italy
